Summary

Full-stack Java developer who ships secure, production-shaped systems - not just tutorials. Built role-based auth platforms and REST APIs across 3 full-stack projects, integrating Spring Boot, React.js, MySQL, and blockchain smart contracts. AWS Certified. 300+ DSA problems solved on LeetCode.

Education

Bachelor of Technology in Computer Science Engineering

2024-2027

KIET Group of Institutions, Delhi-NCR

SGPA: 7.19 / 10

Diploma in Computer Science Engineering

2021-2024

Government Polytechnic, Kanpur Dehat

70.88%

High School

2021

Gauri Shankar Public School, Ghazipur

60.2%

Skills

Programming Languages: Java, JavaScript, C

Web & Frontend Development: React.js, HTML5, CSS3, Tailwind CSS, MapLibre GL

Backend Development: Spring Boot, REST APIs, Spring Security, JWT Authentication

Databases: MySQL

DevOps & Tools: Git, GitHub, Docker, CI/CD, Maven, Postman

Libraries: iText 7, Java2D, Apache Commons CSV

Others / Additional Skills: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA)

Experience

Infosys Springboard Internship 6.0 – Virtual Intern

Jan 2026 – May 2026

Project: Site Survey Tool for Internet Service Providers (ISP)

Remote

- Architected a full-stack ISP site-survey platform (Spring Boot, React.js, MySQL) with JWT-secured access across role based, used in live network deployment planning.
- Modeled a 4-level Property, Building, Floor and Space hierarchy via REST APIs, cutting manual survey data entry through structured endpoint design.
- Automated heatmap-overlay generation from Vistumbler, Kismet, and SPLAT! RF scan data, turning raw signal captures into visual coverage maps without manual processing.
- Validated all endpoints via Postman across sprint cycles in a mentor-guided agile workflow, using Git for version control.

Projects

FarmXchange Application | Java, Spring Boot, React.js, MySQL, JWT, Solidity

May 2026 – July 2026

- Engineered a blockchain-based crop-traceability platform, replacing centralized trust with on-chain verification via Ethereum smart contracts (Solidity).
- Secured REST APIs across 4 distinct user roles (farmer, verifier, buyer, admin) using Spring Security + JWT, preventing unauthorized cross-role access.
- Designed a MySQL schema supporting verification workflows, marketplace listings, wallet transactions, and end-to-end order tracking.
- Registered crop origin and ownership transfers on-chain, making the full supply chain auditable from farm to sale.

Blog Application | React.js, Spring Boot, MySQL, JWT

Jul 2025 – Sep 2025

- Built a full-stack blog platform with JWT authentication and encrypted password storage, supporting distinct author and reader roles.
- Designed CRUD APIs for posts and categories with integrated image upload and media serving, avoiding third-party storage dependencies.
- Built an author dashboard with a dark-mode Tailwind CSS v4 interface and threaded comment system, handling full content lifecycle from draft to publish.

Certifications & Achievements

AWS Certified Cloud Practitioner – Amazon Web Services, Mar 2026

Data Structures and Algorithms – Solved 300+ problems on LeetCode. [LeetCode Profile](#)
